

Problem Statement

Within the University of South Carolina campus and the city of Columbia overall with the increase in student population, there has been a constant decline in the efficiency of parking and public transportation that is affecting not just students but the overall population of Columbia.

Who Is Experiencing The Problem

Students who are enrolled in the University of South Carolina and normal commuting residents within the city of Columbia

What Is The Problem

Many residential locations don't have shuttles such as my own and a lack of parking around class buildings and campus overall

Where Does The Problem Present Itself

Around many buildings such as Close Hipp and Darla Moore there is a lack of metered spots that causes many students to have to walk long distances or park in unauthorized areas, along with this many students don't have access to public transportation and many large apartment complexes don't have shuttles causing many people to have to drive

Why Does It Matter

Students are already focused on their studies and career readiness, and the difficulty of just going to class adds more unnecessary stress, making students' overall lives more difficult. Along with this, the commute to class has gradually been taking longer making students lose time in their day to leaving early for class
